

C.Q.R.iT[®]

electronic lockers and key cabinets

Exceptional solutions for
key and portable item
control

C.Q.R.iT[®] Key Cabinets are the ultimate in security and convenience. Completely automate the process of signing keys in and out. Decide exactly who gets access to what, when and for how long.

AUTHORISATION

The door is secured with a two-point locking system and only authorized users can unlock the door.

CONTROL

Each set of keys can be specifically controlled. Restrict access based on user, group, time or quantity.

ACCESS

Once the door is unlocked, users can only access the sets of keys they're allowed – all others remain locked in place.

ALARMS

Alarms can be audible at the cabinet, send a notification to your smartphone and/or relay the signal to an existing alarm panel.

INTEGRATION

These cabinets manage your existing keys of any size and shape. They can also integrate with your other access control systems or alarm panels.

REPORTING

Every action is automatically recorded giving you real-time evidence of all activities, and instant access to accurate reports.

KEY NOT
RETURNED

Available in any size, the C.Q.R.iT[®] Lockers allow you to securely store and monitor any type of portable item. Control exactly which staff members or contractors can access your valuables.

ASSET LOCKERS

Asset Lockers are for your onsite items such as electronic devices, expensive tools or sensitive equipment. Only authorized users can open specific lockers, and every transaction is recorded. You can control how long each item is allowed out and install cabling to keep your devices charged.

DEPOSIT LOCKERS

Deposit Lockers are ideal for temporary use by staff members or contractors. Users are assigned a short-term locker to store their items, for example staff members who cannot enter a secure zone while holding a cell phone. No one else can access that locker until the user returns.

REDUCE SPACE

Lockers can be dynamically assigned on an as-needed basis meaning you no longer need one locker per person.

CLEAR LOCKERS AT THE END OF THE DAY

Receive notifications if any personal items are left in the lockers at the end of every shift.

INTEGRATE

Integrate with your access control system so staff can access lockers with existing prox cards and even prevent people from leaving without returning their items first.

TRACK USAGE

RFID tracking is used to determine if items have been taken or returned. This provides maximum accountability and prevents substitutions.

SECURELY STORE EXPENSIVE ITEMS

We can construct lockers to house any item - from small mobile phones and radios to larger briefcases and bulky tools.

THE RESULTS

Reduced capital expenditure by purchasing fewer items

Reduced space needed for storage

Alarms/notifications if items not returned

Improved staff accountability

Reduced risk/theft/loss

Elimination of time spent searching for items

Increased operational efficiency

Hard on the outside, clever on the inside - these cabinets are the strongest on the market. They contain all the great features of the C.Q.R.iT[®] Key Cabinets, housed in a heavy-duty exterior.

HIGH-SECURITY • GOVERNMENT
SENSITIVE / RISKY AREAS
DEFENCE • OUTDOORS

MOST SECURE IN THE WORLD

The door is recessed 5mm behind the front face of the cabinet greatly eliminating the risk of unauthorized access. An internal cover plate extends the full height of the door completely obscuring the locking mechanism. When the door is closed, it cannot be removed by removing hinge pins.

DON'T TRUST ANYTHING ELSE

The door is secured with a three-point locking mechanism, two of which are vertically opposed. The external box is formed from 1.6mm steel with a double returns at all edges. All cable ports are covered by an internal baffle.

OUTDOOR MODEL AVAILABLE

Cabinet can be prepared with extra seals so it can withstand the elements.

FLEXIBILITY

Not all applications will require security of this level. You have total flexibility to install a C.Q.R.iT[®] eXtreme in a public area or a high-security zone and use the regular cabinets and lockers in less risky areas. They all run off the same software to provide a streamlined solution for all your keys and items.

FULLY INTEGRATED SOLUTION

For ultimate security, integrate your systems with a High Level Interface (HLI). That means all of your C.Q.R.iT[®] cabinets can be controlled through a third party system.

COMMUNICATIONS

NETWORK (TCP/IP)

WIFI

MOBILE (3G)

USB

ACCESSORIES

PROX READERS

CIC Technology can integrate with almost any prox reader.

FINGERPRINT SCANNERS

To protect against PIN or card sharing, all cabinets can integrate with fingerprint scanners

BREATHALYSERS

Make sure your users are under the legal limit before they can access vehicle keys.

FACIAL RECOGNITION

Be certain that the user at the cabinet is who they say they are.

COLOURED KEY TAGS

Colour code each bunch of keys for easy visual recognition.

DYNAMITE BUTTON

For use in emergencies, this button will release all keys.

TAMPER PROOF CARD HOLDERS

These allow you secure and manage prox cards as well as keys.

KEY CONCEALER

This hides the cut of important keys so they can't be copied.

SECURE KEY RINGS

These high security rings seal permanently into a continuous loop making it impossible to substitute keys without detection. Each key ring is engraved with a unique serial number for maximum accountability.

| DIAMETER | CAPACITY |
|----------|------------|
| 3cm | 1-5 keys |
| 4cm | 5-10 keys |
| 5cm | 10-15 keys |
| 7cm | 15-25 keys |
| 9cm | 25-50 keys |

KEYSECURE® SOFTWARE

The KeySecure® software is flexible and intuitive. It makes light work of even the most complex access control and monitoring.

ALARMS

Customisable alarms include: door forced, tamper detection, AC power out, key timer expired.

MAX KEYS OUT

Limit the number of items each user is allowed out at any one time.

EMAIL / SMS ALERTS

Configure automatic emails or SMS giving you up-to-date information even if you're off site.

TIME ZONES

Restricted the times that users may access items. E.g., Monday to Friday, 9am - 5pm.

TIMER

Place timers on certain items and receive notifications if they haven't been returned.

ENCRYPTED COMMUNICATION

256-bit AES encryption is used to communicate with the cabinets.

SAME USER RETURN

Ensure that the user who removed an item is the one who returns it.

FLEXIBLE ALLOCATION

Single items or groups of items can be allocated to any number of individuals or groups of users.

MULTI CUSTODY

For sensitive items, demand that more than one user is present to sign it out.

NETWORK + USB

Fully integrated network capabilities (TCP/IP) as well as a USB port inside the door for remote sites.

CUSTOMIZATION

Custom key configurations

Locker compartments can be any size and any configuration

Cabinets can be any colour

Transparent doors
