PCSC announces its latest security solutions, the web-enabled iQ*AS*™ and the next evolution of access controllers, the IQ *Plus*™ series

Building upon the success of legacy systems, PCSC releases two technology solutions developed specifically for the needs of the access control and physical security industry.

TORRANCE, CA, February, 1 2017 – PCSC, a designer and manufacturer of quality access control solutions brings the security world an adaptive platform like no other. A simple solution for any security application, designed to adapt to an application's needs through firmware upgrades. Beginning as a standalone web-enabled system, the iQ*AS*™ can be upgraded into an integrated Distributed Intelligence system. Stemming from decades of development experience, the inherent upgrade capabilities of the IQ Plus™ series of controllers makes this the last access system you'll need to purchase.

The simplicity of the iQ*AS*™ is achieved through a web-enabled user interface, removing the fuss of loading software or the requirements of a dedicated PC. Monitoring and administration takes advantage of the mobility of a tablet or smartphone. The system incorporates more security functionality and capacity than most PC-based systems. As part of the adaptive series, the iQ*AS*™ provides the ability to increase security functionality without the need to replace hardware; simply upgrade the firmware to the next level, iQ *Plus*™ series.

As the next evolution, the iQ *Plus*™ series builds upon its predecessor IQ platform of controllers. It also incorporates many of the high level security applications from PCSC's patented Fault Tolerant series of controllers. It's based on a 100% Distributed Intelligence architecture, with modular upgrades for readers, inputs, and outputs. With the controller's adaptive DNA, its features and functionality can be upgraded into a Fault Tolerant door module, known as a Quad Door Module (QDM), providing an upgrade to the Fault Tolerant architecture.

"The adaptive capabilities we've developed into these products provide great value to both our business partners and the end-user," said Mas Kosaka, President and CEO of

PCSC. "The system becomes sustainable for future growth. Rip and replace doesn't need to occur. Instead, the system can evolve and grow through firmware and module upgrades. This lengthens the product's usable life, it's a logical investment. Our products are already known for their longevity and quality. We're maintaining that tradition."

About PCSC

PCSC is a leading supplier of products and services for electronic access control and facility management applications in domestic and international markets. PCSC also offers sophisticated access control management software, integrated video badging, CCTV control, alarm graphics, elevator control and video event recording. PCSC is a subsidiary of TTIK, Inc., and has been in business since 1983. www.PCSCsecurity.com.
