

Clinically Proven—Remote Access Control

An advanced system without the expense of an onsite Security Manager

About 132,000 new cases of melanoma are diagnosed worldwide each year, according to the World Health Organization. Among the highest incidence occurs in people over the age of 40, especially men. It is the most commonly diagnosed cancer in people ages 15–29. As research and treatment increase, so does the demand of new facilities.

The Facility

Skinetics is a new and modern Skin Cancer Clinic located on the Central Coast of New South Wales, about 45 minutes north of Sydney, Australia. Skinetics engages in the latest technology and clinical care and offers state-of-the-art skin

cancer facilities including surgical and non-surgical treatments with near pain-free procedures, including cosmetic scar minimization.

Access Control Requirements

Similar to many small businesses, this medical clinic must allow Doctors, Nurses, Pathology, Administration Staff, Contractors and maintenance workers access to the premises at different times for varying reasons to operate an efficient practice. The use of standard metal keys created more problems than it solved by creating costs, security concerns, issuance and management issues.

The Solution

Utilize PCSC's LiNC-NXG Client Management System, a high security access control without the cost and hassle. Using RFID access cards in the Clinic grants access controlled permissions to the clinic by the many different workers at various times. Remote access management can now control: Time of day access, which doors can be accessed, and by who. Holiday schedules, adding or deleting card access for lost, stolen or removed users, all can now be updated quickly and remotely using PCSC's LiNC-NXG Client Management System.

The Benefits

The Clinic benefits by reduced costs and increased security. With the advanced Access Control System, there is no added expense of a security manager working onsite with the system. The Clinic's manager whether onsite or offsite now knows who has the keys, when they can be used and by

whom, and with a phone call or email can easily make changes to the access parameters.

The system offers professional 24/7 remote management and administration. Business becomes more competitive for the security dealer and integrator with the ability to offer a professional high security access control system with very little time and effort spent on setup and ongoing management of the system. The scalability of the system allows clients, such as the Clinic to grow seamlessly from a single site with a few doors to literally hundreds of doors and card holders.

The installation at Skinetics was provided by Chase Security Solutions, NSW, Australia. chasesecurity.com.au
