PCSC announces the latest in physical security solutions, a simplified cloud-based access control solution for small to large-sized facilities

LiNC-NXG Client Cloud, or simply named “NXG CC” is a cloud-based access control solution with a web-enabled interface, designed to simplify physical access security.

TORRANCE, CA, February, 2 2018 – PCSC, a designer and manufacturer of quality access control solutions announces a ground breaking solution for simplified cloud-based access control. Competitively priced and targeted to meet the end-user needs of small to large-sized facilities everywhere. Providing the same level of high security features found within PCSC’s standard LiNC-NXG application with the added convenience of a user-friendly browser based interface. PCSC’s cloud application provides end-users with a carefree option for card administration as management of their system can be provided for them by the cloud provider. Cardholder and system management can be performed from nearly any device, anywhere at anytime through an online connection.

PCSC offers integrators two marketing options: they may utilize the PCSC based NXG Client Cloud or integrators may create their own NXG Client Cloud network to manage the growth of their business, an advantage for recurring revenue generation.

Integrators will be pleased to find that NXG CC provides automated processes with pre-programmed system parameters and controller configurations, making installation and setup a breeze. The Client Cloud system eliminates the installation of client-side software. Remote maintenance and automated updates reduce costly service calls.

“Keeping things simple is key to our solutions,” said Mas Kosaka, President and CEO of PCSC. “We’ve eliminated client-side maintenance, management is performed remotely and setup procedures are mostly pre-programmed and automated. Additionally, we’ve structured pricing very competitively and provided a method for revenue generation. We’re providing an amazing opportunity for both integrators and end-users.”
