

IQ ELV

Two or Four Door Cab Access Control

ELEVATOR CONTROLLER

The **IQ ELV** series controllers offer the most complete set of elevator control configurations to meet any security requirement. The controllers provide 100% distributed intelligence with configurations for 2 or 4 elevator cabs and from 16 to 64 floors. The floor authorization logic is based on cardholder, floor authorization groups, time of day and day of week. User accountability reporting is provided by battery backed history transactions, recording cardholder information by time and by floor selection. Additionally, the controllers automatically provide security on holidays and weekends.
