FOR IMMEDIATE RELEASE

PCSC Security and Thrive Logic Announce Partnership to Integrate Real-Time AI Logic and Access Control with Autonomy

LOS ANGELES, CA — December 2, 2026 — PCSC Security, a global leader in high-availability physical access control hardware, and Thrive Logic, an innovator in autonomous cognitive AI platforms, today announced a strategic partnership to deliver a unified enterprise security solution. The collaboration integrates real-time AI computer vision directly with fault-tolerant physical access systems to eliminate operational silos and transform physical security infrastructure from a forensic investigation tool into a proactive, defensive asset.

For decades, enterprise security ecosystems have suffered from a critical vulnerability: fragmented data. Access control networks register badge swipes independently while video systems passively record footage, forcing security teams to reactively piece together data streams during a breach. The PCSC and Thrive Logic integration solves this operational silo by embedding advanced cognitive logic and automated "if-this-then-that" rules directly into physical access entry points.

Through this new synergy, PCSC's distributed hardware controllers—including the iQ and Fault Tolerant—continue to execute critical door logics and offline operations with a signature 99.9999% fault tolerance. Simultaneously, Thrive Logic acts as an overlying cognitive brain, ingesting live video streams, access events, and sensor telemetry to automatically identify threats and orchestrate responses across multi-site enterprise environments.

"Our partnership with Thrive Logic represents a major evolutionary leap for physical security infrastructure," said Mas Kosaka, President and CEO of PCSC Security. "By combining PCSC's decades of bulletproof hardware reliability and edge-controller intelligence with autonomous software, we are empowering organizations to move past reactive monitoring and achieve true, real-time preventative security."

"Thrive Logic was built to centralize complex security ecosystems and put enterprise operators in total control," said Nate Green, CEO of Thrive Logic. "By pairing our agentic AI and multi-source data ingestion with PCSC's trusted access hardware, we are closing the gap between threat detection and threat response, giving teams absolute visibility and automated protection."

The combined system introduces several advanced software and hardware capabilities:

- **Cognitive Video Verification:** Cross-references real-time camera streams with PCSC badge swipes to instantly detect and flag perimeter anomalies like tailgating, unbadged entry, doors left open, or unauthorized room crowding.

- **Autonomous Incident Response:** Utilizes Thrive's VARCA AI agent to process supervised alarm inputs from PCSC panels, instantly triggering targeted video recall cascades and alerting on-site guards.

- **Predictive Threat Intelligence:** Converts static access logs from PCSC's LiNC-NXG software into dynamic behavior pattern analytics and activity heat maps to flag facility vulnerabilities.

- **Seamless Legacy Modernization:** Wraps existing physical PCSC hardware deployments in an advanced AI software layer, maximizing previous infrastructure investments while avoiding costly rip-and-replace overhauls.

- **Automated Compliance Logging:** Generates comprehensive, audit-ready compliance logs that automatically pair PCSC credential events with video confirmation records for effortless federal and corporate auditing.

The integrated platform is tailored for high-security enterprise environments across major vertical applications, including Healthcare & Hospitals, Universities & Campuses, Financial Institutions, Government & Critical Infrastructure, and Data Centers. By combining robust edge-controller reliability with autonomous intelligence, organizations can now implement comprehensive, real-time threat mitigation on a single display overview.

Live demonstrations and system architecture consultations of the joint solution are available immediately.

About PCSC Security
PCSC is a premier manufacturer of high-security physical access control systems, offering fault-tolerant controllers, distributed intelligence software, and enterprise-grade security management solutions worldwide.

About Thrive Logic
Thrive Logic is an enterprise security software innovator that layers advanced, agentic AI onto existing physical security and IoT infrastructure. By combining real-time computer vision, multi-source data ingestion, and autonomous automation, Thrive Logic centralizes complex operations into a unified platform, reducing risk and granting organizations complete visibility over their environments.
